

## FireScope Tech Brief : Orchestrate Deployment

“To put it simply, most of the current CMDB solutions out there make me want to take a toaster bath. They’re complex, expensive as hell, and insanely difficult to maintain.”

- FireScope Customer

Deploying a CMDB is traditionally an enormous, complex undertaking, often spanning several months. FireScope Orchestrate, delivered as a physical or virtual appliance, turns this convention on its head. Simply plug it in, turn it on, and step through our easy setup wizard. No headaches.

Our web based Appliance Configuration interface gives you all the tools you need to manage your installation, including the ability to schedule automatic backups and updates with little to no user interaction required. And the self-contained nature of the appliance allows the application to run in a known state, eliminating the problems that come with differing environments.

### Key Features

- Turn-key package. No special prerequisites to worry about.
- Simplified deployment. Just plug it in and turn it on.
- Web based maintenance alleviates the need for third party apps to be loaded on workstations and servers.
- Easily backup and run updates on a regular schedule with little or no user intervention.

### Business Value

- Save time and money by having all the tools needed to manage your installation in one place.
- Appliance gathers its own diagnostic information to help you get better, more accurate support.
- Get faster deployment without special hardware or software prerequisites.
- Reduce downtime with automated backups and system updates.

### Competitive Advantage

- Best in class plug-and-play installation procedure.
- Save time with interactive setup wizard.
- No need for a system administrator to maintain the appropriate environment.
- Scheduled updates keep you current with enhancements and features.
