

FireScope Tech Brief : Orchestrate Visualization & Reporting

“FireScope CMDB provides an impressive reporting and analytics portal framework for all possible IT and business user roles, and its 11 different connectivity methods collect data from virtually any networked asset.”

- Forrester Research

Data is not meaningful without context. That’s why FireScope Orchestrate offers a suite of rich visualization and reporting tools to make it easy to see what’s going on. Never before has it been easier to view, correlate, and comprehend the configuration of your infrastructure.

The integrated mind map provides you with a complete, at-a-glance view of your entire data model from anywhere in the application, giving you essential insight into the relationships involved in complex data models. At the item level, the instance editor shows you the dependencies between your individual items.

Rather than requiring you to purchase cumbersome third party reporting software, FireScope Orchestrate provides an integrated visual reporting engine. You can build reports based on your custom data model with a drag and drop, Web 2.0 application. Then add dynamic charts to them, and reuse them to build customizable summary dashboards. FireScope v reporting provides a fully integrated analytical solution for your IT operation without any additional professional services or complexity.

FireScope Orchestrate state-of-the-art data center visualization automatically builds a 3D, visual representation of your data centers based on the assets you’ve provided. Get a tactical, top down view of your data center, complete with status information with no extra work required.

Key Features

- Interactive mind map provides a complete view of your data model at-a-glance.
- Easily visualize complex dependencies between assets.
- Integrated, model-based visual reporting provides immediate access to critical data.
- State-of-the-art data center visualization provides a realistic, 3D view of your data center.

Business Value

- Save money and reduce risk with rapid access to critical business information.
- Make your data work for you with built-in reporting.
- Improve efficiency with multiple ways to visually navigate your assets and model.
- Gain comprehension of your data with powerful tools for viewing information in context.

Competitive Advantage

- View your data in the context of your entire organization, not as another isolated information silo.
- Visualization tools work automatically without any additional configuration.
- Integrated reporting means not having to purchase additional software to leverage your data.
- Reuse reporting assets to build custom dashboards. No redundant configuration.
