

FireScope Tech Brief : Reporting - Integrated Simplicity

“While the big four’s BSM require consultants, complexity, endless deployment and most of all, money, FireScope centers its products around simplicity, affordability and ease of use – all deployed in a timely, efficient manner.”

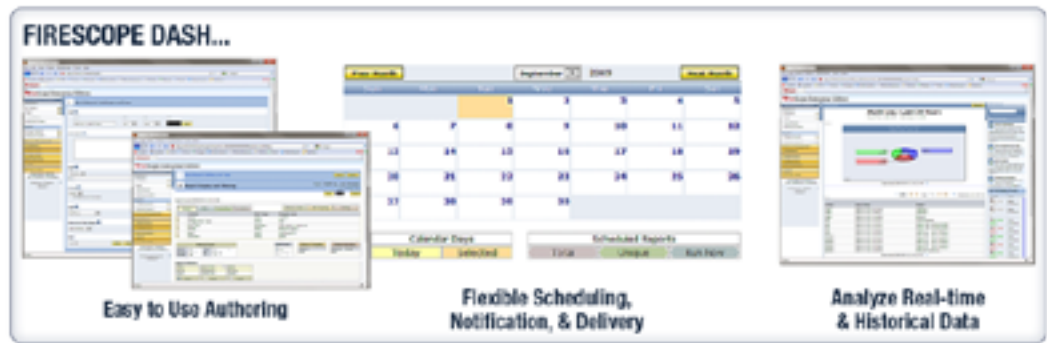

- FireScope Customer

Conventional third-party reporting applications require extra hardware, software, training, DBA resources and ongoing maintenance. Furthermore, poorly integrated reporting applications add unnecessary cost, time and complexity to a busy staff.

FireScope Dash reporting provides a fully integrated reporting solution for your IT operation and business services without any additional professional services or complexity. Share and leverage data with built-in quickstart report templates, which are readily optimized for exploration and analysis. Use the same web-based application for report authoring, viewing, and side-by-side analysis of real-time and historical data. FireScope Dash reporting provides immediate access to critical data, such as KPIs and SLAs, in a context which decision-makers within an organization can find, share and act upon.

OVER COMPLICATED

FIRESCOPE'S INTEGRATED SIMPLICITY

Key Features

- No external tools, client-side installers, or applications required.
- Do not have to maintain separate databases or write SQL queries.
- Smart and flexible report scheduling, notification and delivery capability.
- Advance report data selection, filtering, formatting, and calculation.
- Visualize critical data and trends with customizable charts and graphs.
- Reports available as dashboard modules for side-by-side analysis.

Business Value

- A single architecture for viewing, analyzing and authoring critical operations data.
- Does not require additional database administration or code development.
- Quickstart report templates provide immediate access to KPI data and SLA information.
- Easily manage report access for sharing, collaboration and distribution.
- Self-service report authoring enables anyone to measure performance and make better decisions.
- Integrated simplicity.

Competitive Advantage

- Professional services not required.
- Fully integrated with FireScope Dash – no additional hardware or software installation required.
- Specifically optimized for FireScope Dash data – no need for data warehousing, mining, abstraction, or cube creation.
- Flexible distribution methods: centralized access, email and dashboard integration.
- Intuitive and accessible self-service report authoring with advanced web technology.
- Generate reports out of the box using real-time and historical data and events.
- Customize reports in dashboards for collaboration and correlation.
