

A Single View into the Health and Security of Your Infrastructure

Servers, clients, multiple platforms, multiple departments, firewalls, virus detection software, VPN, anti-spyware, server management tools—the complexity of today's infrastructure is out of control. It's no wonder that 48% of business technology professionals consider managing the complexity of security to be the largest security challenge their company faces.

FireScope appliances aggregate all of the raw data collected by all of your critical systems, network devices and point solutions. This data is then processed by the industry's best Business Intelligence engine, and presented in a fully customizable dashboard and in real-time. As a result, you gain a single, holistic view to the health and security of your entire infrastructure, at a single glance.

Simplify IT Operations with Security and Performance Data Aggregation

- Understand the current state of security and performance for your entire infrastructure, at a single glance.
- Identify security breaches that may be bypassing your current security point solutions.
- Centralize event reaction, no matter what source initially identified the issue. FireScope supports notification of personnel and automatic code execution as well as escalation paths for a more effective response.
- Accurately measure the ROI of your current security point solutions

- Monitor and manage security policies from a single web page
- Meet ongoing compliance needs as they evolve
- Rapidly correlate availability, performance and security data for improved performance and accountability
- Scale your security monitoring capabilities as your business grows
- Save time and money that would otherwise be spent monitoring each device manually

The FireScope Differentiators

Seamless Application and Data Aggregation

FireScope enables organizations to aggregate all of their point solutions into a single, cohesive force for success. Feed all of the event data from any networked asset into FireScope's extensible rules engine and Business Intelligence module, or seamlessly integrate the interface of any application directly into the FireScope web portal. With FireScope, IT professionals gain a single source for all the critical information they need, as well as the tools to bring about change.

Unmatched Flexibility

FireScope is designed to seamlessly fit into your existing operational processes and organization without requiring you to change how you conduct business. Organize your systems geographically, by business service, by managing department or however it makes sense for you. The only limitation is your imagination.

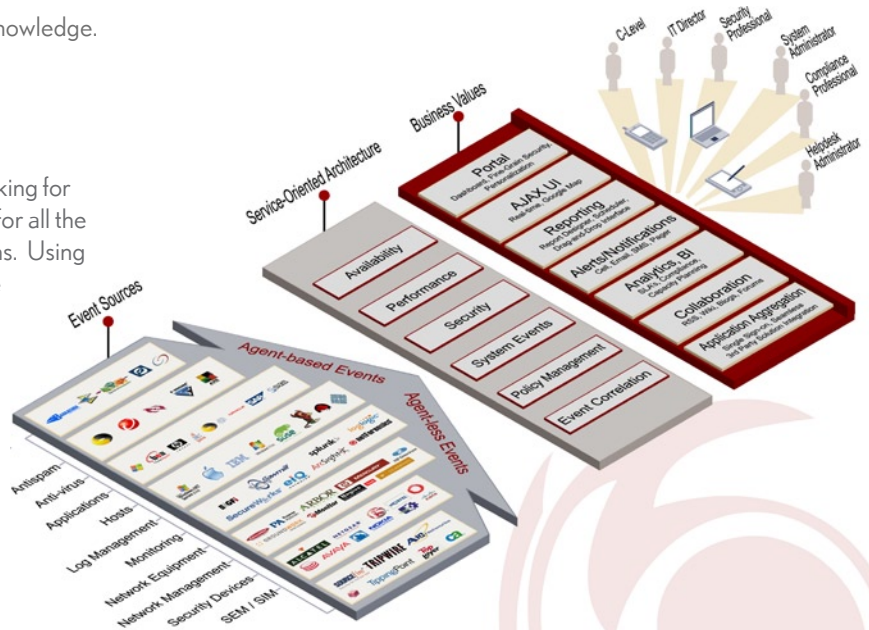

Capture Your Intuitive Knowledge

Today's IT organizations possess a wealth of information that can't be found in print or online – knowledge gained through years of experience that is unique to the hardware, software and processes of your business. FireScope's collaboration features include RSS feeds, blogs, shared calendars, forums, wikis, shared bookmarks and more, making it easy to capture and distribute this intuitive knowledge.

The Industry's First Business Intelligence, Targeted to IT Operations

FireScope represents the holy grail IT leaders have been seeking for years – a single, easy to use and updated in real-time source for all the critical information needed to manage and grow IT operations. Using every networked device as a source of data, users can create reports with drag-and-drop ease to analyze any aspect of IT operations over any period of time, including real-time. Armed with this actionable intelligence, FireScope significantly improves decision making, and ensures better operational performance and execution.

Web 2.0 Meets IT Operations

The same technologies that are revolutionizing the latest generation of web applications are key ingredients in the FireScope web portal. FireScope is designed using Service Oriented Architecture (SOA), includes Single Sign-On (SSO) capabilities, and the JSR-168 compliant J2EE portal enables seamless integration of third-party applications. All data is presented to the user in real-time using AJAX using interactive graphs and charts, tabular grids, Google Maps or your own custom interface elements.

Value for All

FireScope's user customizable dashboards and flexible reporting and analytics engine ensures value for all members of your IT organization. Executive members gain comprehensive insight into SLA status, capacity trending and the business impact of IT. System administrators and specialists can realize faster resolution times, easier root-cause analysis and early warning of potential issues.
